

SOAP DOOR LATCH UPGRADE KIT ELLIS PART NO. E2000083-00K

LIMITED TIME OFFER

\$ 30.00

This kit, Ellis Part# E2000083-00K, was created to provide the parts and instructions necessary for maintenance personnel to install the current style soap door latch, as a retrofit, on machine that shipped with the stainless steel spring latch. The old spring latch would sometimes get damaged by slings, tie down ropes or a variety of other things. This solution is the standard on current production Sideloader washer extractors. Ellis always recommends that the soap doors be kept securely closed, this is one of the safety items that should be reviewed periodically to provide a safe machine for your operators and team members. You will need one kit for each soap door that is on the machine.
